Subject: Groundwater Monitoring and Mitigation Plan TDS Soltec
Date: Friday, August 02, 2013 12:07:15 PM

I reviewed the plan for the tree monitoring portion of the Groundwater Monitoring and Mitigation Plan and I have the following comments that I would like you to include in your response:

1. The number and size of sampling plots should be established for this plan.
2. Add a figure showing the general location of the plots.
3. Consider full data collection on some plots and general health data collection on other plots.
4. The second bullet under Groundwater Mitigation Criteria (Section 3.3) should be: If the groundwater levels drop more than 10 feet below the pre-pumping level and there is evidence of deteriorating oak tree health by the Arborist or Forester, there may be a temporary or permanent cessation of pumping at Well B. If the evidence of deterioration persists after the 5 year period, mitigation will consist of off-site wetland/oak woodland credits at a 3:1 ratio.
5. Add the following to the third bullet: "...as long as the wells operate only as intended under the project's conditions of approval.
6. Add to Section 4.0, second paragraph: "... within five working days."
7. Reports are usually due by the end of January of the next calendar year.

Please contact me if you have questions or comments.

**THANKS,
MAGGIE LOY**
